

Better consumers make a better planet

- We ALL Consume
- We ALL Generate Trash
- We Can Discard Better

Botanic Amenities

Food Service Without The Plastic Waste

Plant-Based Food Service Products & Packaging

Our signature product is a patented thin film from sugarcane polyvinyl alcohol (PVA), stronger than the plastic in bags, gloves, wraps. Certified safe (USDA BioPreferred).

Water-Soluble Thin Films

Plant PVA breaks down completely in water without microplastics, residue or acidification and free of toxins, EDCs and PFAS ("forever" chemicals). When mistaken for food, PVA is non-lethal to wildlife. PVA is widely used in medical applications and an additive in food.

Manufacturing To Scale

We partner with global manufacturers to switch from fossil-based thin film production to certified, environmentally-safe, high-performing bioplastics.

Our goal is to meet the growing demand for sustainable discards with localized thin film production that improves supply chain resilience and reduces dependency on traditional plastics or tree-paper.
