

Green Carib's plastic waste reclamation and reprocessing facility provides the solution.

Many companies recover plastic. Far fewer can produce materials that help global manufacturers satisfy regulatory and sustainability requirements.

GREEN CARIB CAN:

- Increase the value of recyclable plastics by converting them locally into certified recycled materials for export.
- Position Jamaica as a supplier of certified recycled materials to an \$80 billion U.S. and European market where demand significantly exceeds current global supply.
- Create a new export industry that leverages Jamaica's strategic location to connect global manufacturers with certified recycled materials produced in the Caribbean.

WHILE BUILDING SCALABLE RECOVERY INFRASTRUCTURE THAT:

- Reduces marine plastic leakage
- Strengthens tourism sustainability
- Supports waste material recovery
- Creates resilient circular economies
- Decreases climate impact and power grid reliance
- Increases employment and economic empowerment opportunities for local communities

The Time Is Now!

GLOBAL MANUFACTURERS INCREASINGLY REQUIRE

- Certified recycled content
- Traceable sourcing
- ESG-compatible materials

Green Carib leverages Jamaica's ample supply of recyclable plastics, advantageous geographic location and natural port infrastructure to ensure Jamaica benefits from this growing economic opportunity!

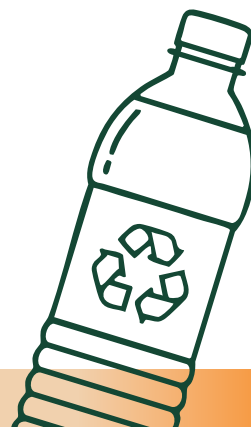

THE GREEN CARIB SOLUTION:

Green Carib is building the infrastructure needed to convert tourism-generated waste streams into certified circular materials—and build infrastructure that creates lasting economic and environmental value for future generations of Jamaicans.

Creating a
cleaner, greener,
more resilient
Jamaica **one
piece of plastic
at a time.**

Who We Are

Green Carib is a waste recovery and reclamation facility. We build resilient circular recovery infrastructure that transforms plastic waste into measurable environmental and economic value for tourism-driven island economies.

.....

What We Do

Green Carib turns plastic waste into clean, raw materials that are certified for export to manufacturers in the United States and Europe.

We recover, sort and trace plastic materials for certified recovery partners, helping reduce marine plastic leakage while establishing circular supply chains, creating measurable economic value for waste haulers, tourism operators and local communities.

.....

Why Green Carib?

Green Carib envisions a future where island nations are no longer endpoints for unmanaged waste streams, but leaders in resilient economies that process waste locally, protect marine ecosystems, and strengthen long-term economic resilience for communities and families.

We help Jamaica by creating stable jobs, increasing income opportunities for waste collectors, reducing landfill waste and carbon emissions, and providing employee housing and energy benefits that support long-term economic security for our workforce.

This is How We Do It

GREEN CARIB WILL:

- Improve local recycling rates by 15,000 tons
- Develop scalable recycling infrastructure
- Support local economic participation by providing stable jobs and housing

Most Caribbean plastic waste recovery systems remain under-resourced, undervalued, and vulnerable to climate disruptions.

Green Carib addresses each of these infrastructure, environmental and economic challenges to create value for waste haulers, hotels, hospitality and tourism companies as well as the local community.

- **Infrastructure:** Green Carib modernizes certified waste recovery systems for island economies by building facilities to collect, sort, trace, certify and recover plastics waste.
- **Environmental:** Green Carib's island-based reprocessing facility keeps waste materials in circulation and plastic out of the Caribbean Sea.

At Green Carib, sustainability is not a side initiative — it is the business model.
- **Economic:** Green Carib is building Jamaica's first scalable, hurricane-resilient plastic recovery system. Our facility is powered by solar energy and fuel produced from food waste, allowing us to conserve energy and operate during power outages and after hurricanes.

Green Carib transforms environmental liabilities into economic assets.

The Green Carib Value Proposition

The materials currently leaking into Jamaica's ecosystems are recoverable assets that can be reintegrated into global circular supply chains.

JAMAICA'S TOURISM INDUSTRY BENEFITS BY:

- Lowering waste hauler fees
- Maximizing the value of recyclables
- Validating their commitment to sustainability

WASTE HAULERS GAIN:

- Increased revenue
- Real-time access to collection data
- Financial incentives for referring new clients

Green Carib pays waste haulers quickly and serves as the tourism industry's sustainability partner.
